

SUPER STRIKERS

GAMEPLAY

- Each match will have a duration of 6 minutes, consisting of two halves of 3 minutes each. Similar to traditional football, the teams will switch sides after each half.
- At the beginning of the game, the ball will be positioned at the center of the field, and both robots will commence simultaneously, eliminating the need for a traditional kickoff.
- A maximum of one team member is permitted to stay in proximity to the field to operate the robots
- The robot is allowed to hold and guide the ball while in motion. To score a goal, the robot must execute a shot with the ball.
- If robots become entangled for a duration exceeding 10 seconds, the referee will instruct a new kick-off (reset).
- The ball will be deemed out of play if it fully crosses any of the sidelines distinguished by white markings.
- The game will be played with a tennis ball.
- In our gameplay, there will be no corner kicks, and any situations that would typically lead to free kicks, corner kicks, or goal kicks in regular football will be replaced by goal kicks.
- A throw-in doesn't require the ball to be passed to another robot. When the referee signals, the robot can initiate its movement into the arena while carrying the ball.
- Fouls will result in penalties if they involve striking or causing damage to the opponent's robots.
- If there is any disagreement or inconsistency, the ultimate decision lies with the coordinators.
- Immediate disqualification of the team will occur in the event of any misconduct or improper behavior.

ROBOT SPECIFICATION

- Every team can maintain only one bot throughout the entire match .
- The weight of the bot is limited to **6 kg** with a tolerance of 5% .

Two distinct robot classes are available: one powered by an off-board supply and another by an on-board supply. For off-board supply robots, battery weight doesn't contribute to the total weight, while on-board supply robots factor in battery weight. Teams have the option to register for either off-board or on-board power supply categories during registration.

- The bot must possess mechanisms for shooting, dragging, or pushing. They are not allowed to grab or grip the ball.
- The bot cannot exceed the dimensions of 30cm x 30cm x 30cm (striker/barrier mechanism included)(length x width x height)
- Failure to maintain bot dimensions will lead to instant disqualification before starting the match.
- The robots are not allowed to use grippers or actions that are intended to harm the opponent's bot.

POWER SUPPLY

- Teams must bring their power supply to the venue of the event.
- The participants must use an onboard electric or non-electric power supply. However, the power source must be non-polluting and must satisfy the safety constraints determined by the organizers. In case of a non-electric power supply, the participants must get it approved by the organizers beforehand via email. Organizers are not responsible for the inconvenience if approval is not sought.
- In the case of an electric power supply, the voltage difference between any two points during any point of time should not exceed 26V.

POINTS SYSTEM

- Scoring through a standard goal will grant the team 5 points.

PENALTIES AND DISQUALIFICATION

- Committing a foul by hitting or sweeping the opponent's bot will result in a deduction of 1 point for the offending team.
- In case of any discrepancy, the final decision rests in the hands of the judges.
- Any act of misbehavior or misconduct will lead to immediate disqualification.
- The competition intends to create a friendly football-like atmosphere for the game.
- The Organisers hold the sole discretion to modify or adjust these specifications and rules at any time. Any alterations will be communicated to the registered teams.

GUIDELINES

- **Team Size:** A team can have a minimum of 2 and a maximum of 4 members.
- **No Double Troubles:** Only one entry would be acceptable. In case of multiple entries, the latest one would be considered for evaluation.
